Dear *Hydroflow*:

My Family Owned Organic Farm was having a water quality issue in the well. In order to alleviate this issue we didn't want to use harmful chemicals that would be dumped into the environment. We could not get our Food Processing License because of the water. MBI Water Solutions LLC. came out and installed an S-38 *HydroFlow* unit on our main line to see if it would alleviate this problem. The technology claimed to be able de-scale pipes, have corrosion protection and remove bio-film in pipes as well as Bio-Kill. We gave it a month and a half to do its job. The One and a half months later we had our License! The results were excellent! The water was clean and clear with just an electric signal! This 100% green technology really works! We are very pleased with the results and are very happy with the *HydroFlow* S-38! Thank you *Hydroflow*!

X
